Re: Thermocrete meets the intent of ULC-S635, Standard for Lining Systems for Existing Masonry or Factory-Built Chimneys and Vents.

Guardian has reviewed our files for the Testing of Thermocrete.

The City of New York requires adherence to ULC-S635, Standard For Lining Systems for Existing Masonry or Factory-Built Chimneys and Vents.

Guardian has reviewed this standard and feels that Ventech Industries, Inc. product Thermocrete meets all critical requirements for Class I and Class II certification. The Standard states:

“A product employing materials or having forms of construction differing from those detailed in these requirements may be examined and tested according to the intent of the requirements, and if found to be substantially equivalent, may be given recognition.”

We feel that the existing extensive test data is “substantially equivalent” and in most cases, superior to the requirement.
